Personal Portfolio Website

Personal Portfolio Website, is designed to introduce a student, display educational qualifications, show technical skills, highlight projects, and provide contact information.
When we open index.html in a web browser, the following output appears.
1. Header Section
-->Displays the name P. Sree Lowkya.
-->Shows the subtitle First-Year B.Tech CSE Student.
-->Contains navigation links: About, Education, Skills, Projects, and Contact.
-->Uses a dark blue background with white text.
2. About Me Section
-->Displays the heading About Me.
-->Introduces the student and their interests.
-->Mentions programming, web development, and artificial intelligence.
3. Education Section
- Displays educational qualifications in separate cards.
- Shows B.Tech Computer Science and sample entries for Intermediate and School Education.
- Each card has a white background, rounded corners, and a subtle shadow.
4. Technical Skills and Hobbies
- Lists HTML, CSS, Python Basics, and Artificial Intelligence Basics.
- Displays hobbies such as listening to music, learning technology, and creative designing.
- Uses a simple, readable layout.
5. My Projects Section
- Displays project cards for the Portfolio Website and College Website.
- Each card contains a project title and a short description.
- When the mouse moves over a card, it slightly moves upward due to the CSS hover effect.
6. Contact Section
- Displays an example email address and location.
- Allows visitors to find the contact information easily.
7. Footer Section
- Appears at the bottom of the webpage.
- Displays the copyright text: “© 2026 P. Sree Lowkya | My Portfolio”.
- Uses a dark blue background with white text.
How the website works
HTML element Purpose
<header> Displays the title and navigation
<nav> Provides links to different sections
<section> Organizes website content
 Creates project and education cards
<a href="#about"> Navigates to a section of the same page
<footer> Displays copyright information
style.css Controls colours, spacing, cards, hover effects, and responsive layout
Final output: A single-page, blue-themed personal portfolio website. Clicking a navigation link takes the visitor to its corresponding section. On smaller screens, the layout adjusts to fit the device.

College Information and Admission Website

```
Explanation of each section
1. Header and Navigation Bar
- Displays the college name: Dr. RVR & NRI Institute of Technology.
- Shows navigation links such as Home, Departments, Facilities, Admissions, and Contact.
- The green background and white text make the heading easy to read.
2. Welcome Section
- Displays a welcome message for students.
- Introduces the college and its educational purpose.
- Helps visitors understand what the website is about.
3. Departments Section
- Displays the available departments in separate cards.
- Examples include CSE, ECE, EEE, and Mechanical Engineering.
- The cards help students identify their areas of interest.
4. Facilities Section
- Lists the facilities available at the college, such as the library, laboratories, classrooms, and sports facilities.
- Each item helps visitors understand the resources offered by the institution.
5. Admissions Section
- Provides information about courses and the admission process.
- Includes an admission-related button or link, depending on the code.
- In the current basic project, this section is informational; it does not automatically submit an admission application unless a form and backend are added.
6. Contact Section
- Displays college contact information, such as an address, phone number, or email if included in the HTML.
- Visitors can use these details to make enquiries.
- Replace any sample contact details with verified college information.
7. Footer
- Appears at the bottom of the webpage.
- Displays the copyright message and website name.
- Completes the design of the page.
3. How HTML and CSS work in this project
HTML element    Purpose
<header>        Displays the college heading
<nav>   Contains navigation links
<section>       Separates departments, facilities, admissions, and contact details
<div>   Groups content into cards
<a>     Creates links to sections or pages
<footer>        Displays information at the bottom
CSS     Adds colors, spacing, borders, card layouts, and responsive design
4. What happens when you run the website?
1. Open the index.html file in a web browser.
2. The college name and navigation bar appear at the top.
3. Scroll down to view departments, facilities, admissions, and contact information.
4. Click a navigation link to jump to its corresponding section, if the link is connected correctly.
5. Resize the browser window to see how the responsive CSS adjusts the layout for smaller screens.

Online Learning Platform Interface

Explanation of each section
1. Header
- Displays the website name LearnSpace.
- Contains navigation links such as Home, Courses, and Instructors.
- The purple background gives the website a modern appearance.
2. Welcome Section
- Displays the heading “Learn Something New Every Day!”
- Introduces the purpose of the learning platform.
- Encourages students to explore courses and develop their skills.
3. Popular Courses Section
This section displays courses in separate cards.
- HTML & CSS: teaches students how to create and style webpages.
- Python: introduces programming concepts and basic coding.
- Artificial Intelligence: introduces AI concepts and applications.
Each course card contains a title, a short description, and a label indicating the learning level or category.
4. How It Works Section
Explains the basic learning process in three steps:
1. Choose: select a course based on your interests.
2. Learn: study the course material.
3. Improve: practice your skills and develop your knowledge.
These steps help visitors understand how the platform is intended to be used.
5. Our Instructors Section
- Displays information about instructors.
- Shows the subjects they teach, such as Python and web development.
- Helps students understand who provides guidance in the courses.
The instructor details in a beginner project may be sample information.
6. Footer
- Appears at the bottom of the webpage.
- Displays the website name and copyright message.
- Provides a neat ending to the page.
3. HTML and CSS used
HTML element Purpose
<header> Displays the website heading
<nav> Contains navigation links
<section> Separates courses, learning steps, and instructors
  Groups course information into cards
<h1> and <h2> Display headings
<p> Displays descriptions
<a> Creates clickable links
<footer> Displays the bottom section
External CSS controls the purple background, fonts, card borders, spacing, hover effects, and responsive layout.
4. What happens when you run the website?
1. Open index.html in a web browser.
2. The LearnSpace heading and welcome message appear at the top.
3. Scroll down to view the available courses and instructor information.
4. Use the navigation links to move to connected sections.
5. Resize the browser window to see how the layout adjusts to different screen sizes.
